### Information Resources

#### Information Resources by Class and Subclass

##### **Databases**

##### ⇒ ACM Digital Library

Business Source Corporate (Corporate Resource Net)

(Multidisciplinary subject coverage)

Dialog Classic on the Web

(Training and password required.)

DTIC STINET

(Citations of Defense Technical Information Center scientific and technical documents)

EEDD Submission Form

Examiners' Electronic Digest Database (EEDD)

(Database of examiner submitted NPL)

EPOQUE

(EPO's databases, available on stand-alone terminal in CPK2, 4B40)

##### ⇒ IEEE Xplore

(Full page images of over 800,000 Electrical & Electronic Engineering articles, papers and standards, 1988 - present. Select content is available from 1952-1987.)

INSPEC

(Seven million well-indexed physics, EE, and IT abstracts, 1969-present)

IP.com

(Defensive disclosures)

NTIS (National Technical Information Service)

(resource for government-funded scientific, technical, engineering, and business related information)

Proquest Direct

(Multidisciplinary subject coverage)

Readers' Guide to Periodical Literature

(citations to popular multidisciplinary magazines)

Research Disclosure

(Published monthly as a paper journal and now as an online database product with advanced full text searching capabilities for defensive disclosure information.)

Software Patent Institute (SPI)

*(Select "Free Access")*

**STN on the Web** (training and password required)

*(The other link is via the Patent Examiner's Toolkit. On your computer, click on the START button, then on the PE Toolkit, then on STN Express.)*

**True Query**

*(A resurrected version of the old "Computer Select" database, providing full text access to over 100 technology focused publications, a glossary of technical terms, product reviews and over 60,000 product specifications from 1999 to the present. If html code appears on your screen, click browser's "Reload" or "Refresh" button.)*

**Books and Journals**

➡ [Search STIC Online Catalog](#)  
[InfoSECURITYnetBASE](#)

**IEEE ANNOUNCES NEW RELEASE FOR IEEE XPLORE ENHANCEMENTS - [LEARN MORE.](#)**

**IEEE Xplore** provides full-text access to IEEE transactions, journals, magazines and conference proceedings published since 1988 plus select content back to 1950, and all current IEEE Standards.

**FREE TO ALL:** Browse tables of contents and access Abstract records of IEEE transactions, journals, magazines, conference proceedings and standards.

**IEEE MEMBERS:** Browse or search to access any complete Abstract record as well as articles from IEEE Spectrum Magazine. Access your personal online subscriptions using your active IEEE Web Account. If you do not have one, go to "Establish IEEE Web Account" to set up an account.

**CORPORATE, GOVERNMENT AND UNIVERSITY**

**SUBSCRIBERS:** Search and access complete Abstract records and full-text documents of the IEEE online publications to which your institution subscribes.

## ACM Digital Library

A half century of pioneering concepts and fundamental research have been digitized and indexed in a variety of ways in this special collection of works published by ACM since its inception. The ACM Digital Library includes bibliographic information, abstracts, reviews, and full texts.

### **1** A survey of data mining and knowledge discovery software tools

82%

Michael Goebel , Le Gruenwald

**ACM SIGKDD Explorations Newsletter** June 1999

Volume 1 Issue 1

Knowledge discovery in databases is a rapidly growing field, whose development is driven by strong research interests as well as urgent practical, social, and economical needs. While the last few years knowledge discovery tools have been used mainly in research environments, sophisticated software products are now rapidly emerging. In this paper, we provide an overview of common knowledge discovery tasks and approaches to solve these tasks. We propose a feature classification scheme that can be ...

### **2** Recommender systems using linear classifiers

82%

Tong Zhang , Vijay S. Iyengar

**The Journal of Machine Learning Research** March 2002

Volume 2

Recommender systems use historical data on user preferences and other available data on users (for example, demographics) and items (for example, taxonomy) to predict items a new user might like. Applications of these methods include recommending items for purchase and personalizing the browsing experience on a web-site. Collaborative filtering methods have focused on using just the history of user preferences to make the recommendations. These methods have been categorized as *memory-based*

### **3** Item-based top-*N* recommendation algorithms

80%

Mukund Deshpande , George Karypis

**ACM Transactions on Information Systems (TOIS)** January 2004

## Volume 22 Issue 1

The explosive growth of the world-wide-web and the emergence of e-commerce has led to the development of *recommender systems*---a personalized information filtering technology used to identify a set of items that will be of interest to a certain user. User-based collaborative filtering is the most successful technology for building recommender systems to date and is extensively used in many commercial recommender systems. Unfortunately, the computational complexity of these methods grows | ...

#### 4 Tree induction vs. logistic regression: a learning-curve analysis 80%

Claudia Perlich , Foster Provost , Jeffrey S. Simonoff

**The Journal of Machine Learning Research** September 2003

Volume 4

Tree induction and logistic regression are two standard, off-the-shelf methods for building models for classification. We present a large-scale experimental comparison of logistic regression and tree induction, assessing classification accuracy and the quality of rankings based on class-membership probabilities. We use a learning-curve analysis to examine the relationship of these measures to the size of the training set. The results of the study show several things. (1) Contrary to some prior o ...

#### 5 Learning response time for WebSources using query feedback and 80%

application in query optimization

Jean-Robert Gruser , Louiqa Raschid , Vladimir Zadorozhny , Tao Zhan

**The VLDB Journal — The International Journal on Very Large Data Bases** March 2000

Volume 9 Issue 1

The rapid growth of the Internet and support for interoperability protocols has increased the number of Web accessible sources, WebSources. Current wrapper mediator architectures need to be extended with a wrapper cost model (WCM) for WebSources that can estimate the response time (delays) to access sources as well as other relevant statistics. In this paper, we present a Web prediction tool (WebPT), a tool that is based on learning using query feedback from WebSources. The WebPT uses dimensions ...

#### 6 Measuring system normality 80%

Mark Burgess , Hårek Haugerud , Sigmund Straumsnes , Trond Reitan

**ACM Transactions on Computer Systems (TOCS)** May 2002

Volume 20 Issue 2

A comparative analysis of transaction time-series is made, for light to moderately loaded hosts, motivated by the problem of anomaly detection in computers. Criteria for measuring the statistical state of hosts are examined. Applying a scaling transformation to the measured data, it is found that the distribution of fluctuations about the mean is closely approximated by a steady-state, maximum-entropy distribution, modulated by a periodic variation. The shape of the distribution, under these con ...

#### 7 High performance data mining (tutorial PM-3) 80%

Vipin Kumar , Mohammed Zaki

**Tutorial notes of the sixth ACM SIGKDD international conference on Knowledge discovery and data mining** August 2000

#### 8 Efficient search for association rules 80%

Geoffrey I. Webb

**Proceedings of the sixth ACM SIGKDD international conference on Knowledge discovery and data mining** August 2000

**9** Industry track papers: Handling very large numbers of association rules 80%

in the analysis of microarray data

Alexander Tuzhilin , Gediminas Adomavicius

**Proceedings of the eighth ACM SIGKDD international conference on Knowledge discovery and data mining** July 2002

The problem of analyzing microarray data became one of important topics in bioinformatics over the past several years, and different data mining techniques have been proposed for the analysis of such data. In this paper, we propose to use association rule discovery methods for determining associations among expression levels of different genes. One of the main problems related to the discovery of these associations is the scalability issue. Microarrays usually contain very large numbers of genes ...

**10** Computing curricula 2001 80%

**Journal on Educational Resources in Computing (JERIC)** September 2001

**11** IS '97: model curriculum and guidelines for undergraduate degree 77%

programs in information systems

Gordon B. Davis , John T. Gorgone , J. Daniel Couger , David L. Feinstein , Herbert E. Longenecker

**ACM SIGMIS Database , Guidelines for undergraduate degree programs on Model curriculum and guidelines for undergraduate degree programs in information systems** December 1997

Volume 28 Issue 1

**12** Applying associative retrieval techniques to alleviate the sparsity 77%

problem in collaborative filtering

Zan Huang , Hsinchun Chen , Daniel Zeng

**ACM Transactions on Information Systems (TOIS)** January 2004

Volume 22 Issue 1

Recommender systems are being widely applied in many application settings to suggest products, services, and information items to potential consumers. Collaborative filtering, the most successful recommendation approach, makes recommendations based on past transactions and feedback from consumers sharing similar interests. A major problem limiting the usefulness of collaborative filtering is the sparsity problem, which refers to a situation in which transactional or feedback data is sparse and i ...

**13** Evolving data mining into solutions for insights: Scaling mining 77%

algorithms to large databases

Paul Bradley , Johannes Gehrke , Raghu Ramakrishnan , Ramakrishnan Srikant

**Communications of the ACM** August 2002

Volume 45 Issue 8

Which insights about data structure make it possible to analyze the very large databases collected by Internet, business, scientific, and government applications?

- 14** Evolving data mining into solutions for insights: Data-driven evolution of 77%  
 data mining algorithms  
 Padhraic Smyth , Daryl Pregibon , Christos Faloutsos  
**Communications of the ACM** August 2002  
 Volume 45 Issue 8  
 Fundamentally, these algorithms are driven by the nature of the data being analyzed, in both scientific and commercial applications.
- 15** The impact of information systems on organizations and markets 77%  
 Vijay Gurbaxani , Seungjin Whang  
**Communications of the ACM** January 1991  
 Volume 34 Issue 1  
 The adoption of information technology (IT) in organizations has been growing at a rapid pace. The use of the technology has evolved from the automation of structured processes to systems that are truly revolutionary in that they introduce change into fundamental business procedures. Indeed, it is believed that "More than being helped by computers, companies will live by them, shaping strategy and structure to fit new information technology [25]." While the importance of the rel ...
- 16** Cluster ensembles --- a knowledge reuse framework for combining 77%  
 multiple partitions  
 Alexander Strehl , Joydeep Ghosh  
**The Journal of Machine Learning Research** March 2003  
 Volume 3  
 This paper introduces the problem of combining multiple partitionings of a set of objects into a single consolidated clustering *without* accessing the features or algorithms that determined these partitionings. We first identify several application scenarios for the resultant 'knowledge reuse' framework that we call *cluster ensembles*. The cluster ensemble problem is then formalized as a combinatorial optimization problem in terms of shared mutual information. In addition to a direct ...
- 17** An expert system for credit evaluation and explanation 77%  
 Luke Hodgkinson , Ellen Walker  
**The Journal of Computing in Small Colleges** October 2003  
 Volume 19 Issue 1  
 We present an expert system, Credit Evaluation and Explanation Expert System (CEEES), that decides whether to grant credit lines to applicant firms. CEEES, which is developed in Prolog, uses a meta-level interpreter to generate proofs for its decisions. The rule-based language used by CEEES enables the various models and decision-making processes used by individual financial institutions to be easily incorporated into the knowledge base, allowing adaptability for commercial ventures. We evaluate ...
- 18** Foundation of a framework to support knowledge management in the 77%  
 field of context-aware and pervasive computing  
 Philipp Amann , Gerald Quirchmayr  
**Proceedings of the Australasian information security workshop conference on ACSW frontiers 2003 - Volume 21** January 2003  
 In this paper we propose a framework to combine Knowledge Management and context-aware and pervasive computing, emphasizing on synchronization and adaptation issues of workflow processes in mobile settings. The key aspect of the proposed framework is to enable adaptive, two-way interaction between context-aware systems and users in mobile settings. In contrast to existing concepts, we aim at capturing active feedback from users, which should contribute to the *Organizational*

*Memory, after ...*

**19** Fast detection of communication patterns in distributed executions 77%

Thomas Kunz , Michiel F. H. Seuren

**Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research** November 1997

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

**20** Sequences and strings: On effective classification of strings with 77%

wavelets

Charu C. Aggarwal

**Proceedings of the eighth ACM SIGKDD international conference on Knowledge discovery and data mining** July 2002

In recent years, the technological advances in mapping genes have made it increasingly easy to store and use a wide variety of biological data. Such data are usually in the form of very long strings for which it is difficult to determine the most relevant features for a classification task. For example, a typical DNA string may be millions of characters long, and there may be thousands of such strings in a database. In many cases, the classification behavior of the data may be hidden in the comp ...

### 21 A template model for multidimensional inter-transactional association rules 77%

Ling Feng , Jeffrey Xu Yu , Hongjun Lu , Jiawei Han

**The VLDB Journal — The International Journal on Very Large Data Bases** October 2002

Volume 11 Issue 2

Multidimensional inter-transactional association rules extend the traditional association rules to describe more general associations among items with multiple properties across transactions. "After McDonald and Burger King open branches, KFC will open a branch two months later and one mile away" is an example of such rules. Since the number of potential inter-transactional association rules tends to be extremely large, mining inter-transactional associations poses more challenge ...

### 22 Web mining for web personalization 77%

Magdalini Eirinaki , Michalis Vazirgiannis

**ACM Transactions on Internet Technology (TOIT)** February 2003

Volume 3 Issue 1

Web personalization is the process of customizing a Web site to the needs of specific users, taking advantage of the knowledge acquired from the analysis of the user's navigational behavior (usage data) in correlation with other information collected in the Web context, namely, structure, content, and user profile data. Due to the explosive growth of the Web, the domain of Web personalization has gained great momentum both in the research and commercial areas. In this article we present a survey ...

### 23 Information technologies for the 1990s: an organizational impact perspective 77%

Detmar W. Straub , James C. Wetherbe  
**Communications of the ACM** November 1989  
 Volume 32 Issue 11

When a thing is new, people say: "It is not true." Later, when its truth becomes obvious, they say: "It is not important." Finally, when its importance cannot be denied, they say: "Anyway, it is not new." Adapted from William James

## 24 Database and digital library technologies: Decision tree classification of spatial data streams using Peano Count Trees 77%

Qiang Ding , Qin Ding , William Perrizo

**Proceedings of the 2002 ACM symposium on Applied computing** March 2002

Many organizations have large quantities of spatial data collected in various application areas, including remote sensing, geographical information systems (GIS), astronomy, computer cartography, environmental assessment and planning, etc. These data collections are growing rapidly and can therefore be considered as spatial data streams. For data stream classification, time is a major issue. However, these spatial data sets are too large to be classified effectively in a reasonable amount of time ...

## 25 Estimating business targets 77%

Piew Datta , James H. Drew , Andrew Betz , D. R. Mani , Jeffery Howard

**Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining** August 2001

Determining and setting maximal revenue expectations or other business performance targets---whether it is for regional company divisions or individual customers---can have profound financial implications. Operational techniques are changed, staffing levels are altered and management attention is re-focused---all in the name of expectations. In practice these expectations are often derived in an ad hoc manner. To address this unsupervised task, we combine nearest neighbor methods and classical ...

## 26 Discovering associations with numeric variables 77%

Geoffrey I. Webb

**Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining** August 2001

This paper further develops Aumann and Lindell's [3] proposal for a variant of association rules for which the consequent is a numeric variable. It is argued that these rules can discover useful interactions with numeric data that cannot be discovered directly using traditional association rules with discretization. Alternative measures for identifying interesting rules are proposed. Efficient algorithms are presented that enable these rules to be discovered for dense data sets for which applica ...

## 27 A streaming ensemble algorithm (SEA) for large-scale classification 77%

W. Nick Street , YongSeog Kim

**Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining** August 2001

Ensemble methods have recently garnered a great deal of attention in the machine learning community. Techniques such as Boosting and Bagging have proven to be highly effective but require repeated resampling of the training data, making them inappropriate in a data mining context. The methods presented in this paper take advantage of plentiful data, building separate classifiers on sequential chunks of training points. These classifiers are combined into a fixed-size ensemble using a heuristic ...

**28 Mining a stream of transactions for customer patterns** 77%

Diane Lambert , José C. Pinheiro

**Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining** August 2001

Transaction data can arrive at a ferocious rate in the order that transactions are completed. The data contain an enormous amount of information about *customers*, not just transactions, but extracting up-to-date customer information from an ever changing stream of data and mining it in real-time is a challenge. This paper describes a statistically principled approach to designing short, accurate summaries or *signatures* of high dimensional customer behavior that can be kept current w ...

**29 Data mining with sparse grids using simplicial basis functions** 77%

Jochen Garcke , Michael Griebel

**Proceedings of the seventh ACM SIGKDD international conference on Knowledge discovery and data mining** August 2001

Recently we presented a new approach [18] to the classification problem arising in data mining. It is based on the regularization network approach but, in contrast to other methods which employ ansatz functions associated to data points, we use a grid in the usually high-dimensional feature space for the minimization process. To cope with the curse of dimensionality, we employ sparse grids [49]. Thus, only  $O(hn^{-1}n^{d-1})$  instead of ...

**30 On the quantification of e-business capacity** 77%

Moises Goldszmidt , Derek Palma , Bikash Sabata

**Proceedings of the 3rd ACM conference on Electronic Commerce** October 2001

In order for current e-Businesses to mature from hastily assembled systems and applications, formal processes must be put in place for planning and budgeting, pricing and costing, and for establishing quality of service and service--level assurances. There are many challenges that e-Businesses face in formalizing these processes. The most important problem is to bridge the semantic disconnect between business objectives and the information system performance objectives. Next, the characterizatio ...

**31 Exploring data mining implementation** 77%

Karim K. Hirji

**Communications of the ACM** July 2001

Volume 44 Issue 7

**32 A framework for constructing features and models for intrusion** 77%

detection systems

Wenke Lee , Salvatore J. Stolfo

**ACM Transactions on Information and System Security (TISSEC)** November 2000  
Volume 3 Issue 4

Intrusion detection (ID) is an important component of infrastructure protection mechanisms. Intrusion detection systems (IDSs) need to be accurate, adaptive, and extensible. Given these requirements and the complexities of today's network environments, we need a more systematic and automated IDS development process rather than the pure knowledge encoding and engineering approaches. This article describes a novel framework, MADAM ID, for Mining Audit Data for Automated Models for Intrusion ...

- 36** Content-based book recommending using learning for text categorization 77%  
 Raymond J. Mooney , Lorie Roy  
**Proceedings of the fifth ACM conference on Digital libraries** June 2000  
 Recommender systems improve access to relevant products and information by making personalized suggestions based on previous examples of a user's likes and dislikes. Most existing recommender systems use collaborative filtering methods that base recommendations on other users' preferences. By contrast, content-based methods use information about an item itself to make suggestions. This approach has the advantage of being able to recommend previously unrated items to users with unique interests ...

Susan S. Kirschenbaum , Wayne D. Gray , Richard M. Young

**ACM SIGCHI Bulletin** April 1996

Volume 28 Issue 2

The Cognitive Architectures and Human-Computer Interaction Workshop examined computational cognitive modeling approaches to human-computer interaction issues (HCI). The five major architectures and variations represented were briefly summarized. Participants compared approaches to a set of selected HCI problems and alternative solutions, and compared the strengths and weaknesses of the architectures. A list of additional issues was generated and discussed.

Volume 28 Issue 4

**51 Object-oriented AI: a commercial perspective** 77%

Paul Harmon

**Communications of the ACM** November 1995

Volume 38 Issue 11

Computer journals and magazines are currently filled with stories about object technology, just as they were filled with stories about artificial intelligence (AI) and expert systems in the early 1980s. The naive reader might think that expert systems technology had failed and that object-oriented technology was the hot new software approach of the 1990s.

**52 Human-computer communication and response** 77%

Doris S. Shaw , Dershung Yang , James Garrett , Suresh Bhavnani

**Proceedings of the 1993 ACM conference on Computer science** March 1993

Human beings learn to communicate through mutual efforts to develop shared understandings within a given context. With neural network technology, computers may learn to identify objects and behaviors in the CAD context by which they may "understand" the needs of designers. This capability can enable the computer to

respond adaptively to assist individual users.
